

LIFE® OxygenPac

Simple and Easy to Use!

With the capability to be used as an inhalator for breathing victims, or as a resuscitator for non-breathing victims, the LIFE OxygenPac is a wall-mounted emergency oxygen unit that is clearly labeled for easy access in an emergency situation, with a clear cover and simple two step instructions located on the outside of the unit. This unit includes a convenient handle and weighs 18 lbs.

A workplace model offers the two flow settings (LIFE-612), while the EMT model offers variable flow (LIFE-025). A constant reading supply gauge allows oxygen levels to be monitored, even when the unit is turned off, and the included CPR mask features a one-way valve, which can fit either children or adults.

LIFE-612

6 LPM (NORM) and 12 LPM (HIGH)

LIFE-025

0-25 LPM - variable flow
12 liter-flow settings

LIFE-6FF
